

Carriage Roller

Carriage Rollers - Carriage rollers are specially designed bearings that are used on lift masts to be able to help them function within tough environmental conditions. Lift masts are frequently subjected to oscillations, shocks, vibrations and high dynamic and static loads. This apparatus is frequently exposed to environmental influences such as dust, cold, heat, contamination, aggressive ambient air and moisture. Therefore, the lift masts' guidance arrangements need to be specifically robust and have a specific high load carrying capacity.

In order to help compete in lots of different environmental surroundings, carriage rollers were designed for lots of lift masts. While having the ability to deal with a specifically high load carrying capacity, these bearings provided an economical operational security for the lift masts' guidance arrangements.
