Used Parts for Forklifts

Used Forklift Parts - In due course, lift truck parts will wear and need to be replaced. Buying new components could become a costly undertaking so another idea is to obtain used lift truck parts. This could save much money in the long run. It is a great idea to purchase used forklift parts that have been remanufactured. These parts would ensure that you are getting parts which would work for a long time and be productive.

Worn or broken parts that are remanufactured are a very cost effective solution than rebuilding. With rebuilding parts, just the components which are broken or worn out get changed, which means that other wearable parts can break down soon after acquisition.

Remanufacturing however offers the best assurance for second-hand parts. Reproduced components are taken apart and cleaned and then all wearable pieces are replaced. All wearable components are replaced regardless of age or wear which is one more reason why reproduced parts generally work so much better. Any part within the part is new and this provides much longer life to the used part. Based on the forklift components which are being redone, the cleaning process and the whole remanufacturing process would differ.

The engines are cleaned after a complete disassembly. Several engine components like for example pistons, spark plugs, rings, valves, valve springs, and filters can be replaced during the process of remanufacturing. The engines are hot tested after reassembly to ensure that there are no noise, no oil pressure problems, no leaks or any vacuum.

Transmissions are pressure washed, disassembled and oven cleaned. A comprehensive examination is done in order to check for any cracks. Seals, bearings and bushings are all replaced. Normally, the replacement components utilized on transmission components meet OEM specifications.

A few parts like for instance the water pump, torque converters, the alternator, the starter and steer axles can obtain longer serviceability after being reproduced and having all wearable components replaced. The electronic control in the electric lift truck is maintained by the control card. This particular card can even be reproduced with replacing all aged and worn out parts. Not like several forklift components the control card could only have the worn and aged parts replaced.

Parts that are remanufactured have to be thoroughly inspected upon reassembly to ensure they are in good condition prior to being sold. When acquiring these components, it is a good idea to make certain that they have undergone all of the proper testing and inspections. On certain bigger parts like for example steer axles, engines and transmissions, OEM specification replacement parts must be used.

The forklift dealer can ensure that the components they have reproduced meet the OEM specifications. This will also ensure the parts meet industry standards. Many details go into remanufacturing used parts. This attention to detail provides more serviceability out of reproduced components compared to the parts that were simply rebuilt.
